

KIWO® PROFI WASH

Hand developing spray gun for screen printing photoemulsions

The KIWO PROFIWASH is a valuable tool for the manual developing of screen printing photoemulsions. Due to its fine spray of water through the three nozzles, stencils can be developed efficiently. Even highly water resistant photoemulsions and/ or slightly overexposed details can often still be opened.

PROPERTIES

The KIWO PROFIWASH is equipped with a 3 nozzle spray head made of a high quality and wear resistant plastic material. The high precision nozzles work with a flat stream angle of 60°. It allows to develop all commonly used photoemulsions.

The convincing results:

- Thorough developing of finest details
- Decisive time saving
- Drastically reduced water consumption

CONNECTING DETAILS

The most suitable working pressure is between 10 – 20 bar. For most practical use the KIWO PROFIWASH is connected to a high pressure cleaner, but it can also be used with normal water pressure of 4 – 6 bar and is supplied with a brass hose fitting with exterior thread which fits for 3/8" to 1/2" hoses.

ACCESSORIES

Hose with fittings, 2.5 m and 5 m length (to be ordered separately).
