10 reasons to upgrade to Version 10

#1 *ContourNesting, Tex&Repeat* and *PrintBoard* are now included!
Version 10 opens up exciting new market opportunities for Caldera users: **textile, wallpaper, ceramics, glass, wood and CAD.**

#2 Increase your RIPing speeds
Unleashing the power of smarter algorithmic processing, **Version 10** RIPs up to two times faster than previous versions.

#3 Receive live updates
Update notifications about builds and versions are now automated via an online service, ensuring that critical updates reach the user rapidly.

#4 Set up faster workflows
The new **QuickPrint** feature allows a user to send a job to print using a preset configuration.

#5 Create advanced tiling projects
New & improved **Tiling+** now makes it possible to create tiles of different sizes, allowing users to access new markets, such as multi-canvas applications.

#6 Enjoy our new GUI
Designed for ease of use, the new, fully-featured **Version 10** interface allows users to focus only on live tasks. Newly designed icons and markers have been standardized to create a fresh modern style within the GUI.

#7 Identify Jobs with QR codes
V10 users can add **QR Codes** alongside a print, with an automated cut path, to enable easy removal as required.

#8 Add grommets easily
Grommets and eyelets can be easily added to artwork from within the Print interface.

#9 Download new profiles
Profiles can be accessed from within a new online library, using **EasyMedia.**

#10 RIP larger files
Through the inclusion of **APPE 3.3**, which carries with it all the benefits of 64bit data handling, users can now RIP massive files that were previously hindered by a lack of on-board memory. This means users can leverage their processor's full active memory to provide additional efficiencies across the full job queue.
