

PREGAN[®] NT 9

Ready-to-use screen mesh cleaner and degreaser made of renewable raw materials

PREGAN NT 9 is a highly efficient cleaning and degreasing agent for all types of screen meshes. It prevents the appearance of pinholes and surface deterioration when coating with direct emulsions. Economical application and optimum distribution even on coarse meshes due to its viscous consistency. In its formulation mainly components which are either made of renewable raw materials or produced biotechnically were used. PREGAN NT 9 is pH-neutral, free from phosphates and chlorides and easily biodegradable.

APPLICATION

Apply a few squirts of PREGAN NT 9 onto the mesh and brush well onto both sides until the resulting foam has been evenly distributed. Contamination and fats are being emulsified and water soluble. Rinse with water until it runs off without foam. After drying, the screen can be coated. The foam very quickly disappears in the waste water.

It is recommended to clean/degrease the mesh just prior to coating to prevent fresh contamination of the mesh.

COLOUR

Colourless

CONSISTENCY

Viscous liquid

HEALTH HAZARDS/ ENVIRONMENTAL PROTECTION

PREGAN NT 9 is biodegradable and can be emptied into drains in usual working dilution.

Please follow further information given in the material safety data sheet.

STORAGE

2 years (at 20 - 25°C and tightly closed original container)

PREGAN NT 9 freezes at approx. 0°C. It can be applied again after thawing.
